A Journal for Your Terminal That Explains Itself.

Terminal Buddy

Product Vision & Specification v2 / Personalization without complexity

NotebookLM

Editorial Technical

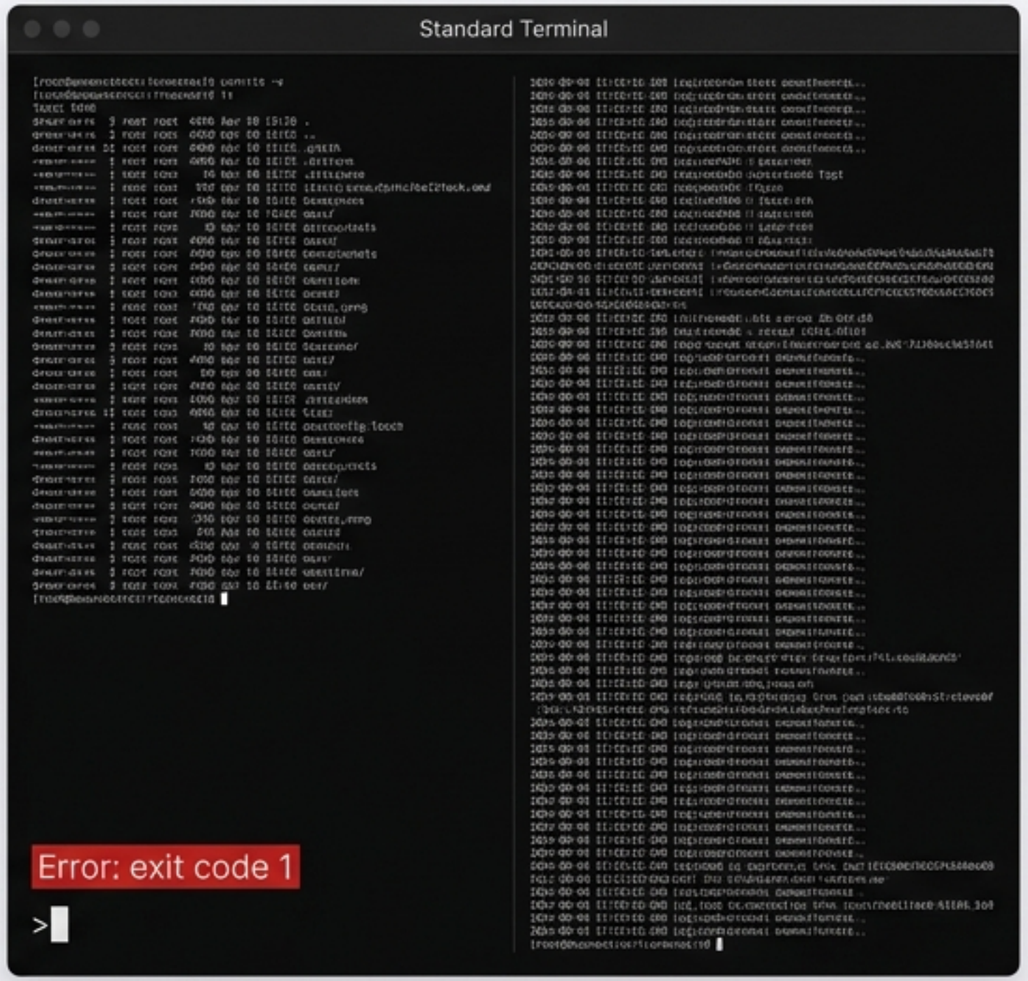

The Hostile Black Box.

No Memory.
"What command did I run last Tuesday?"

No Explanation.
Cryptic errors requiring expert knowledge.

No Safety Net.
The anxiety of breaking the system.

Accessibility Gap.
A wall of text is a nightmare for neurodivergent users.

NotebookLM

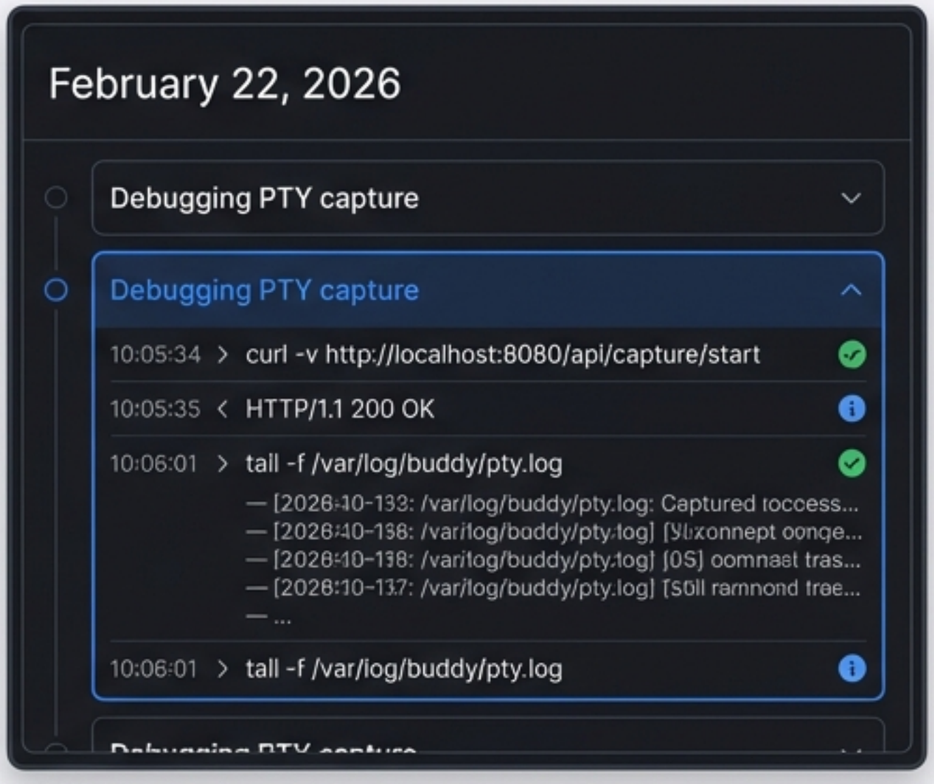

From Command Line to Living Logbook

The Old Way

>_

Ephemeral. Linear. Forgotten.

The Buddy Way

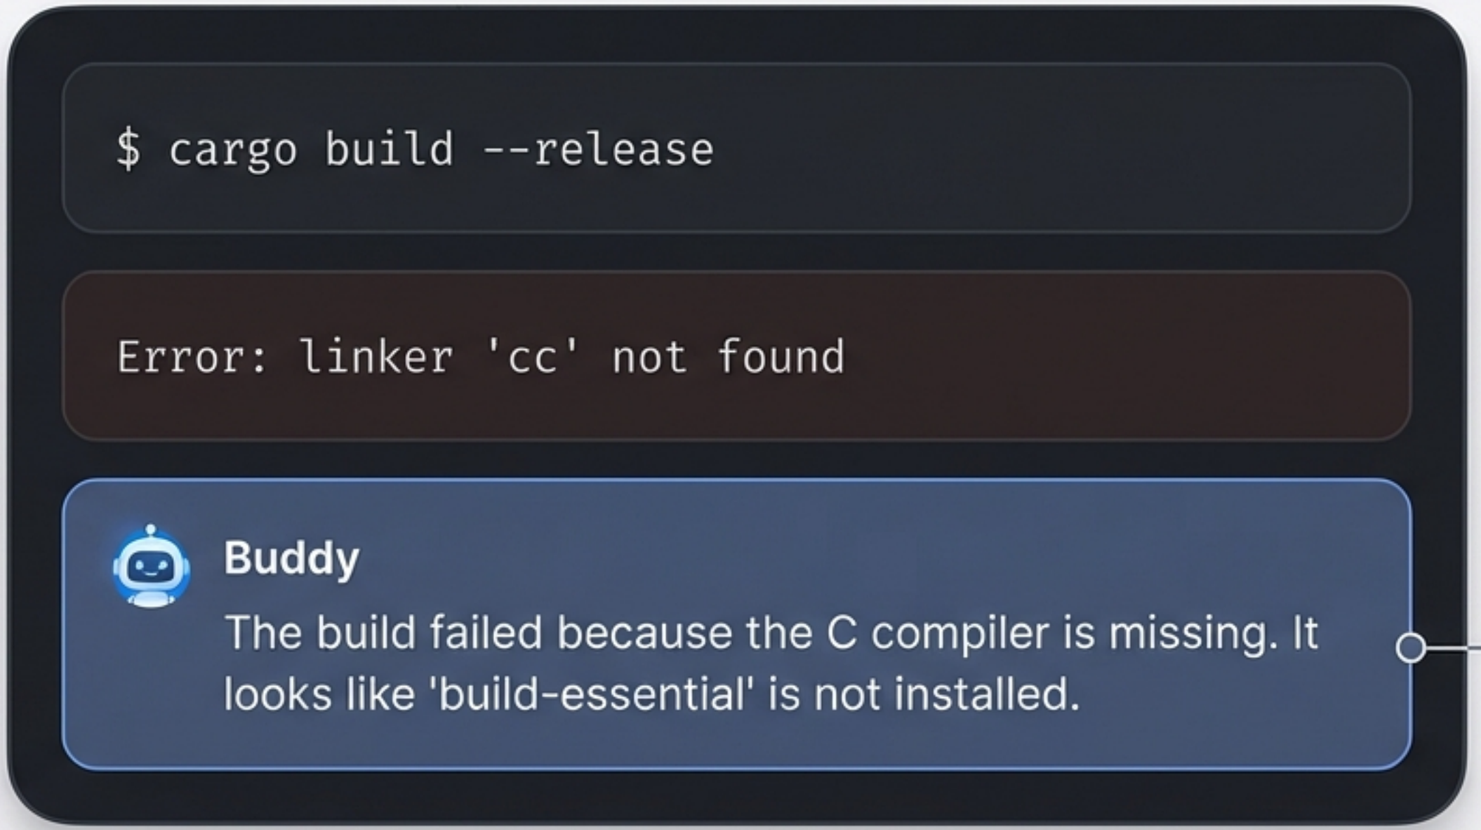

Journal Interface

Key Insight: Sessions are the atomic unit, not commands. Open the app. See history by topic. Understand immediately.

NotebookLM

Grounded Truth, Not Hallucination

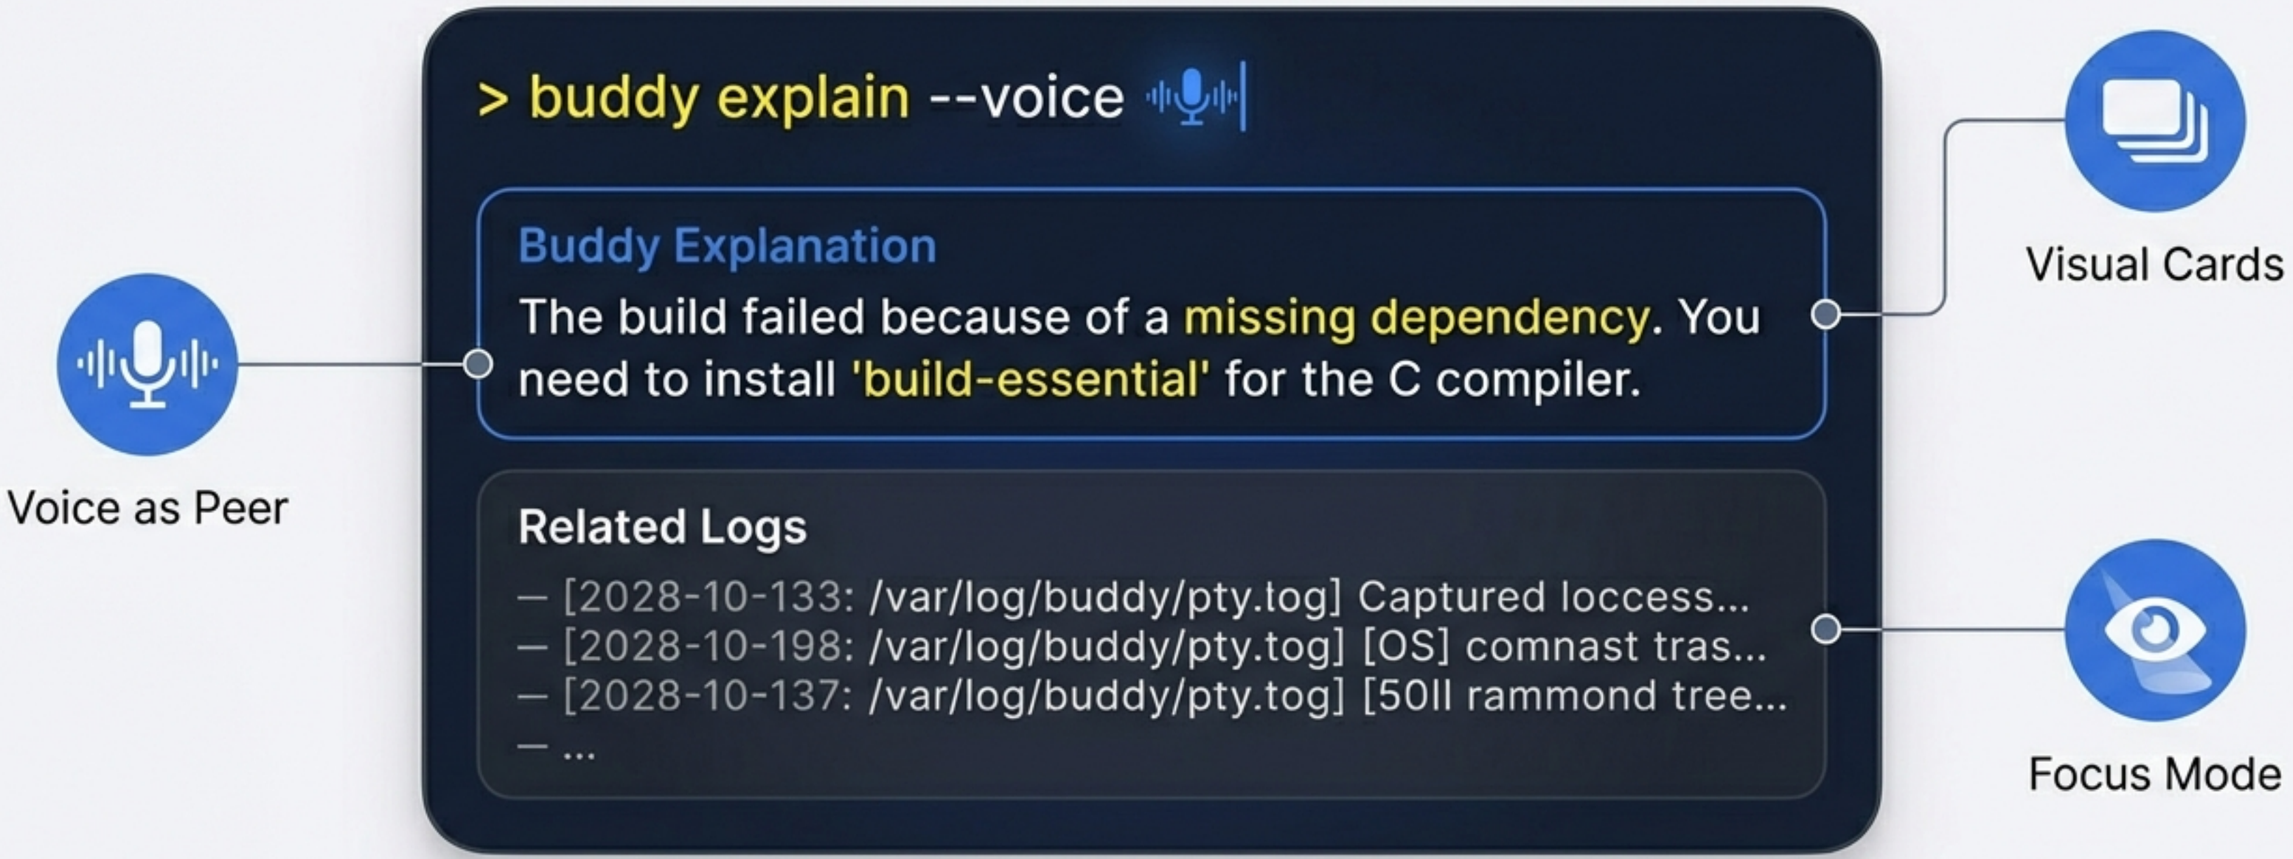

Mechanism: Command Run → System Correlates Output + Filesystem + Logs → Buddy Explains Root Cause

NotebookLM

Designed for Focus.

Accessibility is not a mode. It is the default.

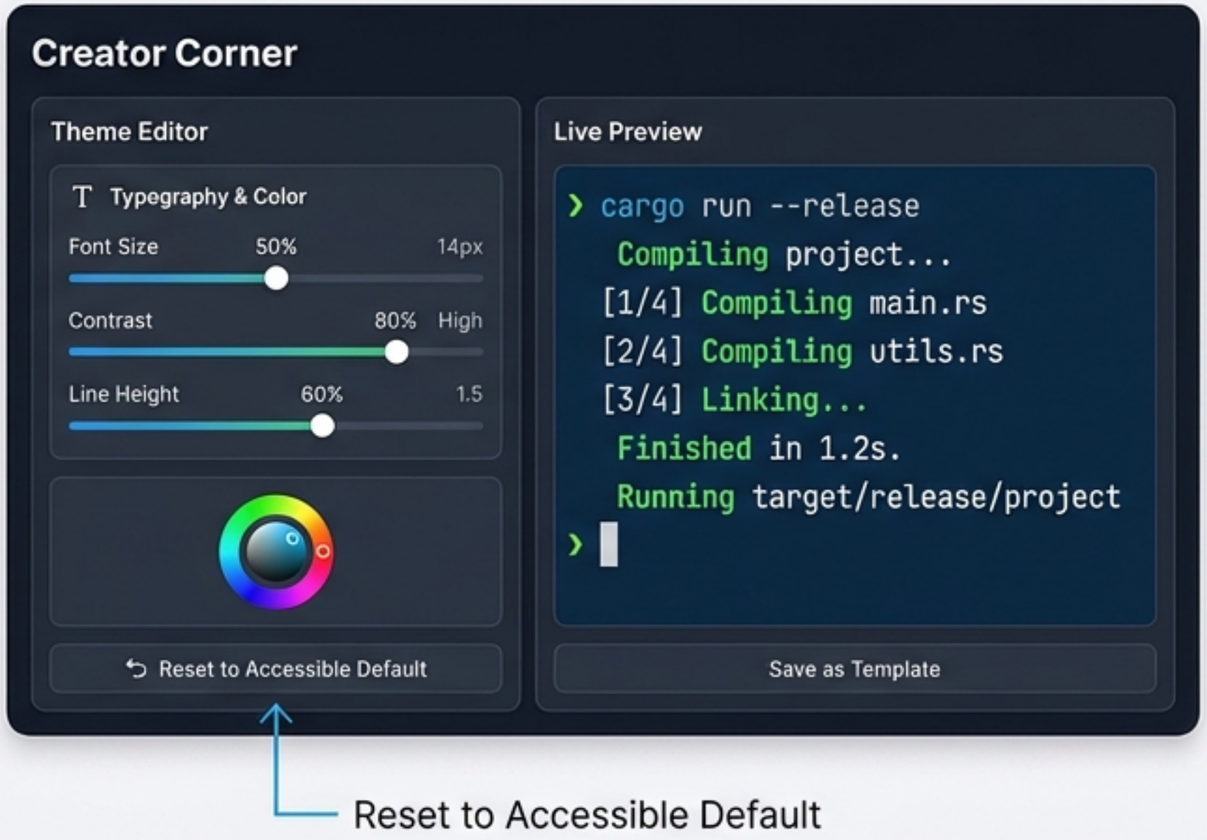

The “Curb-Cut Effect”: What aids the neurodivergent user helps the senior engineer drowning in context.

NotebookLM

Empowerment via Customization

Design, save, and share personalized terminal appearances.

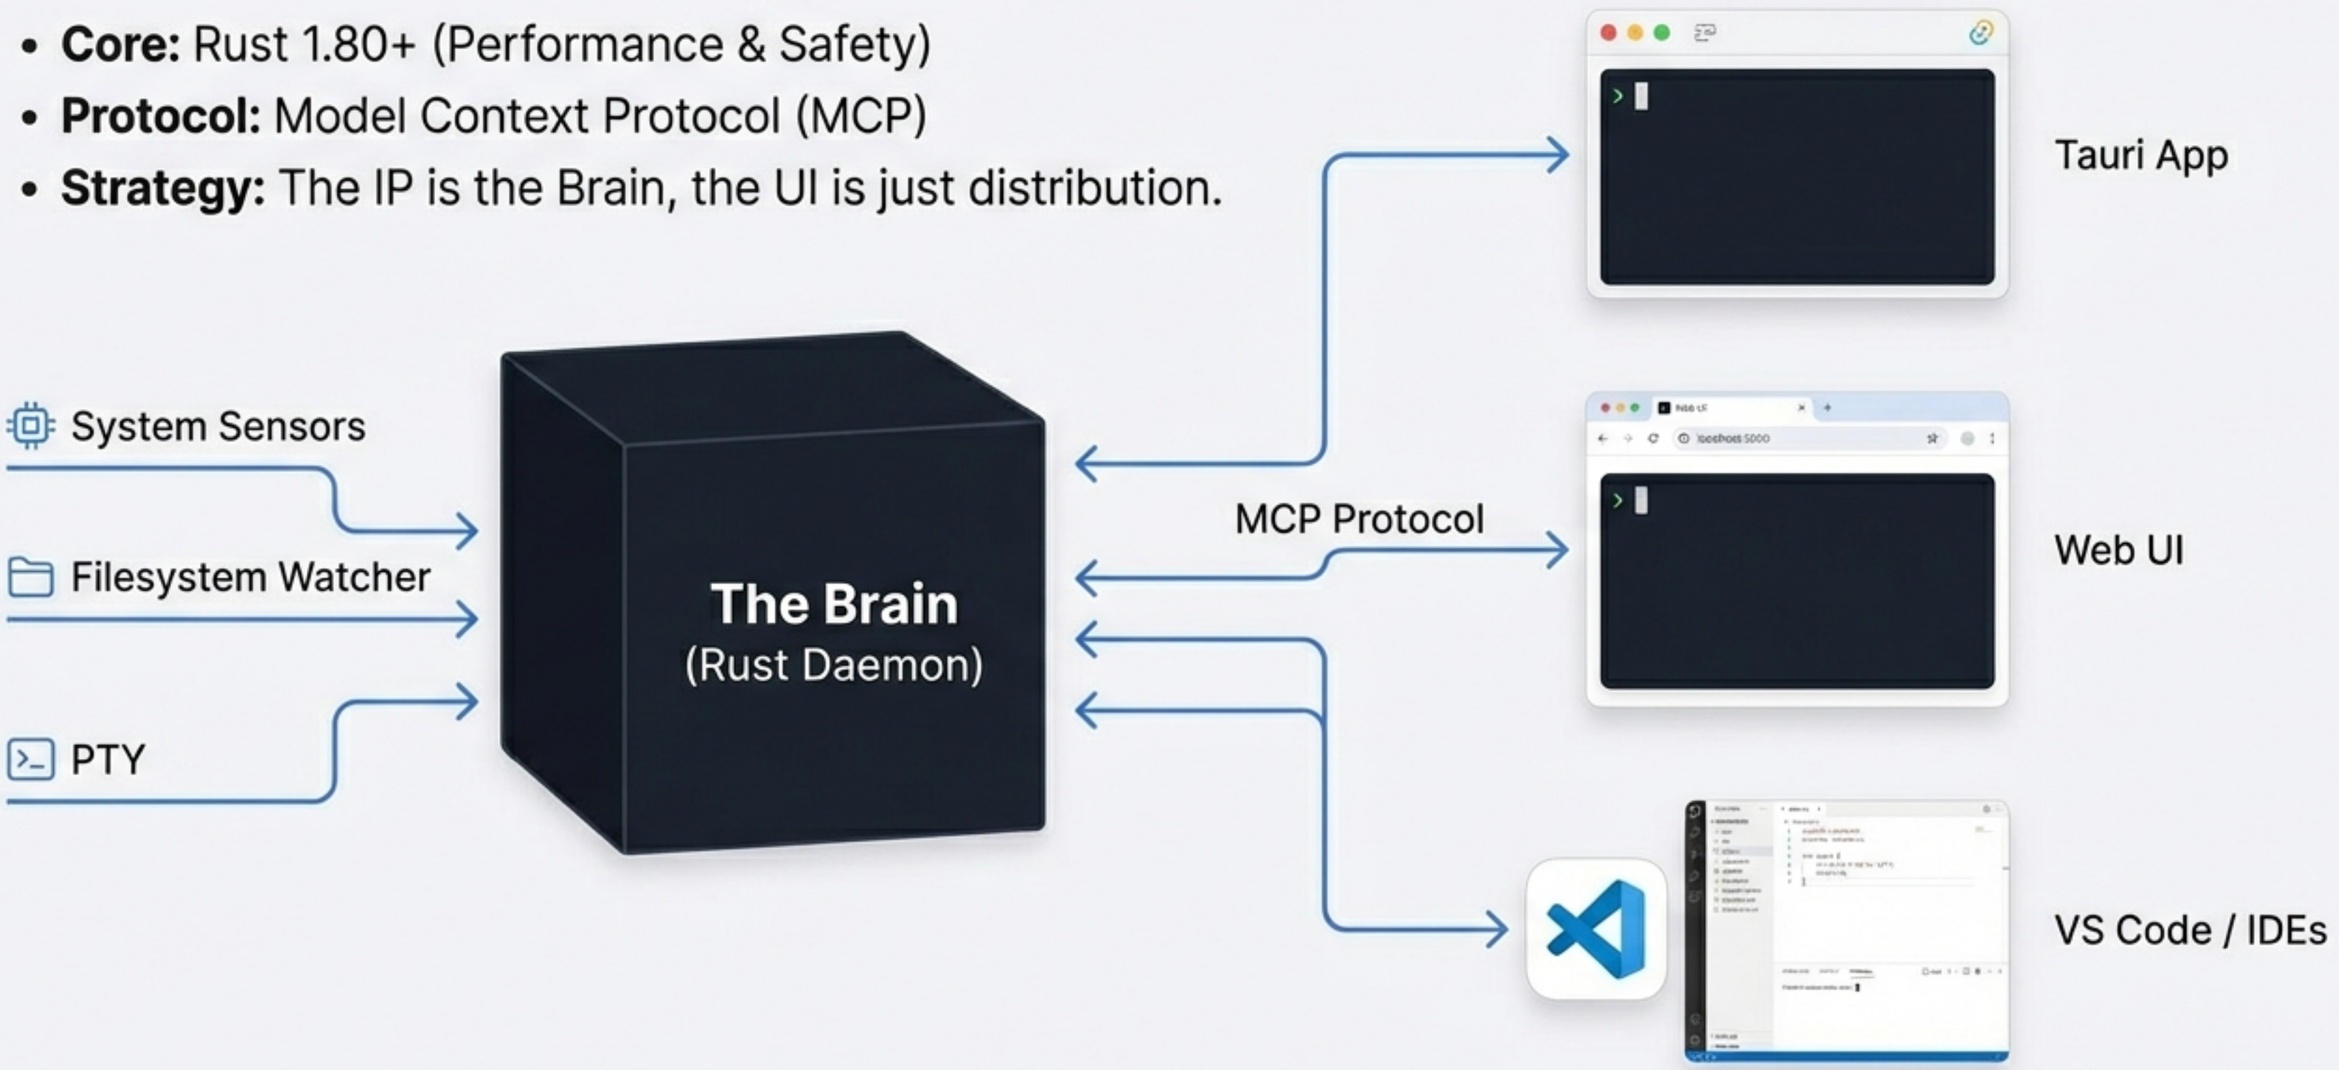

NotebookLM

One Brain, Many Skins.

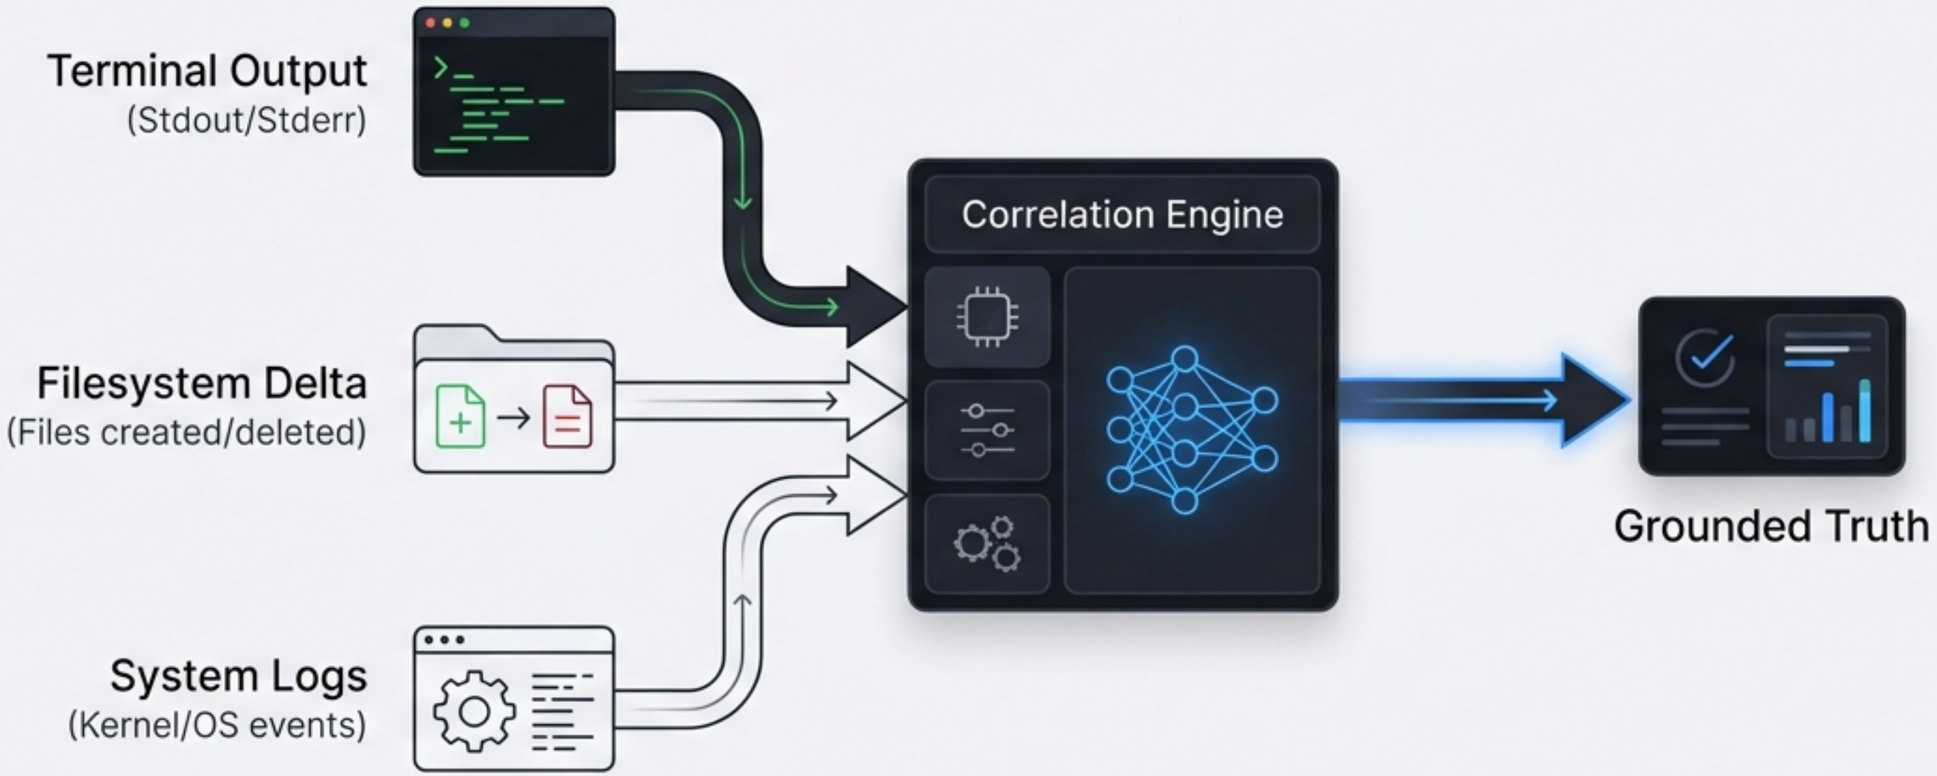

- **Core:** Rust 1.80+ (Performance & Safety)
- **Protocol:** Model Context Protocol (MCP)
- **Strategy:** The IP is the Brain, the UI is just distribution.

NotebookLM

The Correlation Engine

Why is the explanation accurate? Because it's not just reading the screen.
The AI explains based on what the kernel *actually did*

NotebookLM

Total Recall: The Memvid Engine

- **Semantic Search:** ‘Find that build error from last week.’
- **Time Travel:** Scrub through session history video.
- **Auto-Titling:** Sessions name themselves (e.g., 'Debugging PTY capture').

NotebookLM

Local-First & Privacy.

On-Device Processing by Default. Your data never leaves your machine unless you explicitly connect a cloud API (BYOK).

Local Whisper
(Voice Processing)

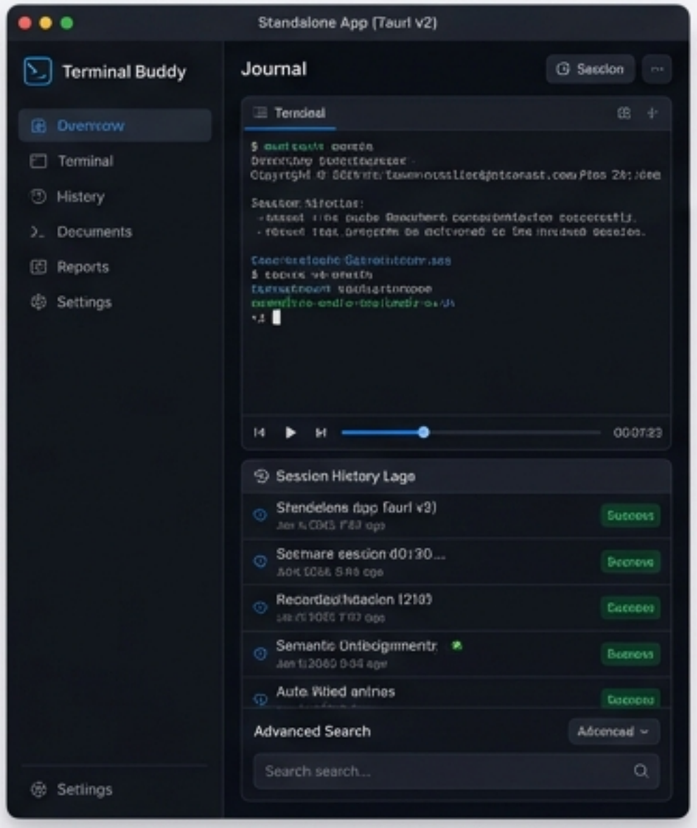

Local Embeddings
(Search)

Local Storage
(SQLite/.mv2)

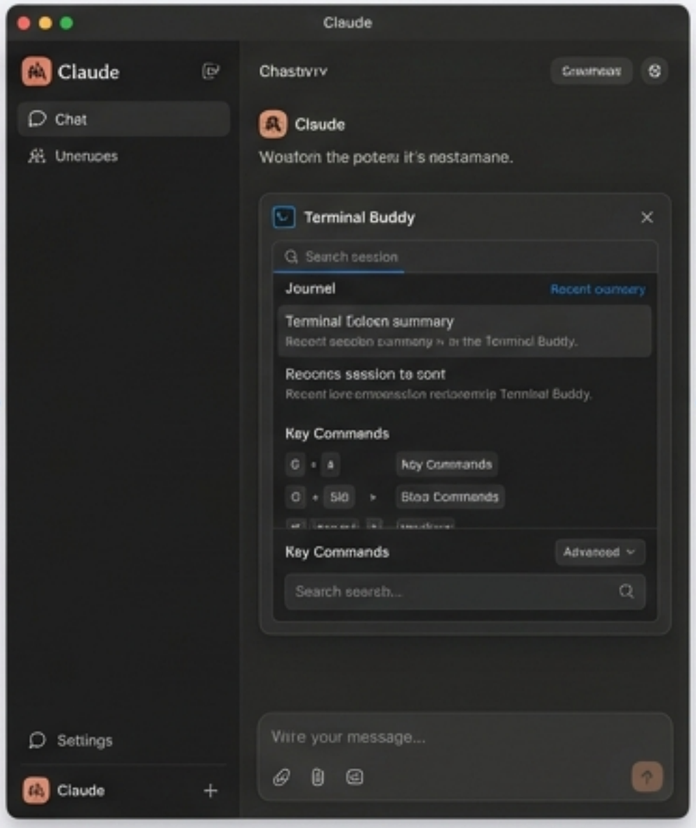

NotebookLM

Multi-Surface Distribution.

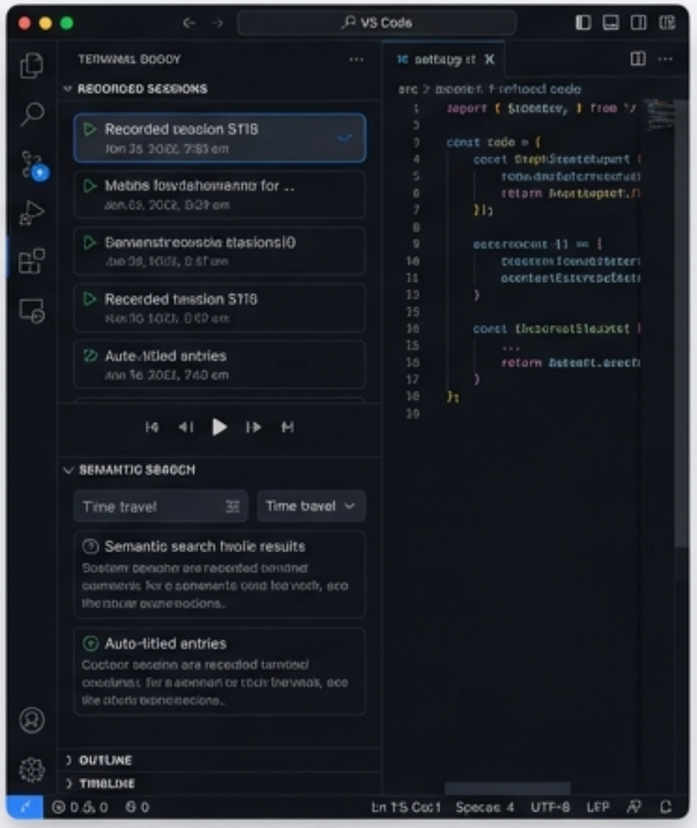

Zero friction adoption via MCP. Users discover it in Claude, upgrade to the Standalone App.

The Full Experience (Tauri v2)

MCP App (Discovery Funnel)

VS Code Integration

NotebookLM

The Three Personas.

The Learning Dev.

Needs safety & explanation. Driver of Viral Growth.

The ADHD Power User.

Needs memory & organization. The Pro User ($).

The Accessibility-First Org.

Needs compliance & team sync. The Enterprise Revenue ($$).

NotebookLM

Structural Advantage

Why they **can’t copy** us:
A data **flywheel** that gets smarter with time, **protected** by privacy architecture and community network network effects.

NotebookLM

From Brain to Ecosystem

Phase A: The Brain

Daemon + MCP Server built

Phase B: The Body

Tauri App + Journal UI + Creator Corner. (Current Focus)

Phase C: The Ecosystem

Plugins + Cloud Sync + Enterprise

Revenue Model: Open Core + Theme Store + Enterprise Seats

NotebookLM

The Manifesto.

Terminals should **remember**.

Commands should be **explainable**.

Accessibility isn’t optional.

It’s not about replacing the terminal.
It’s about making it **work for humans**.
